

Takachiho Corporation

Product and technology information

Shirasu is a unique volcanic soil created from magma. It is a natural material with a special structure and composition found in no other material. Shirasu-wall is a plaster material created by Takachiho from shirasu. It is an ideal residential building material, with air purifying and eco-friendly properties unattainable with any manmade substance.

Company Introduction

Takachiho Corp. manufactures and sells eco-friendly building materials made from shirasu and other all-natural ingredients. Shirasu is a unique volcanic soil created naturally from magma. Takachiho's healthy, eco-friendly products help create safe, comfortable living environments.

[Company structure for market development/overseas expansion]

Our company has staff in the R&D center to support technical development. Several development projects are now in progress with major companies. We have a system for supporting overseas companies in Chinese, English, German, and Korean. We are now developing sales channels to Hong Kong, Macau, Korea, USA, and EU.

[Market share/Ranking]

All of our products and technologies are protected by patents, so there are no competitive products.

Fig. 1 Shirasu Extraction Process: Shirasu is an eco-friendly building material. Shirasu is already so fine that it does not require a grinding process.

Fig. 3 Takachiho Walls Expand Abroad: National Public Facility-Korea. Shirasu walls are in the Theater, Music Hall and Office.
