

Product and technology information

Our technology, OLM(Oxide Layer Method), repairs deteriorated water pipes by using water processing device "THE BIOWATER". It is a modernized technology of Japanese traditional water processing method using mineral crystals. It enables to reduce clogging ratio of water pipes by changing rust inside pipes into magnetite. It stops not only leaking water but also improves water quality so that you can drink tap water. And it's capable to improve the quality of goods in case of that they need water in manufacturing process.

Moreover, the effectiveness of our water improvement method lasts quite long so that you need less budget to pipe maintenance.

Company Introduction

We started as a waste water treatment company in 1909. After the World War 2, we expanded to water supply business and started water equipment maintenance service. Through this business, we found that many customers had much trouble with rust-corroded pipes because rust lowered water quality. Given this situation, we developed technology to solve rust problem of water pipes.

Now, we have completed this technology as " OLM " and it begins to prevail the market.

Company strength

We market our technology as " OLM " and produce its indispensable device " THE BIOWATER"as well. We are a maker and at the same time a sales company , which means that we can carry out construction work of " OLM " more accurately than any other construction company.

Regarding to its effectiveness, we always take datas of what is going on inside pipes.

So we have rich archives of " OLM" documents and experiments. We never quit research nor developing.

Company Information

Industry Equipment maintenance technology

Corporate name TOSHI KOGYO CO.,LTD.

Representative CEO Yasuo Tajiri

Capital 30,000,000JPY

Number of Employees 21

Person In Charge Shigemi Tajiri

Head office 25 Miharudai Minami Ward, Yokohama City, Kanagawa pref., Japan

Main phone number +81-045-231-1686

Web address ■ <http://www.toshikogyo.co.jp> ■ <http://www.biowater.co.jp>

Established date 1909

Acquired Certification Quality certificated by Japan Water Works Association
Corporation certificated by Yokohama intellectual property award

Main Clients Japan Railways, Hitachi seisakujo ,Mitsubishi heavy industry,NEC,JFsteel,
Ebara food industry, Shinjuku Mitsui building group, etc.
