

Business Progress Inc.

Product and technology information

Business Execution Platform (BEP) enables companies to model/execute their business without any programming. BEP uses event (a business situation to be handled) and action (a series of actions to be taken to cope with the situation) model(EA model) to model businesses, and the EA model defined can be executed at once on the platform. For the model execution, the platform supports business execution providing features,

- Detect (automatically from IoT/System data) or register (by staff noticed an event) events.
- Visualize events on maps, diagrams (manufacturing line) or business flow diagrams, showing subjects or locations where events take place.
- Present action to be taken for the event. Action can be pre-defined or dynamically composed while executing businesses.
- Action can be assigned and executed by staff and all the action is recorded.

Companies can optimize their businesses by

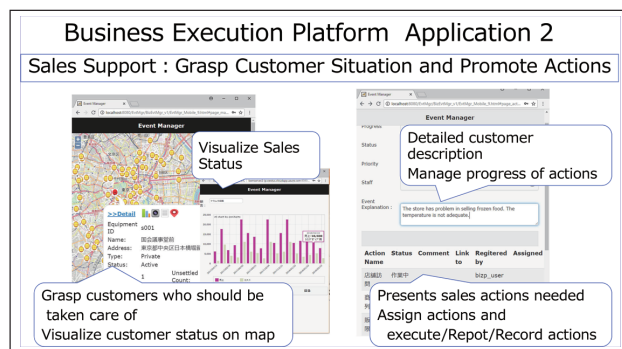

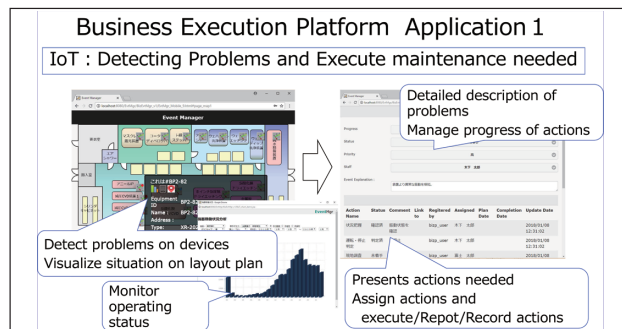

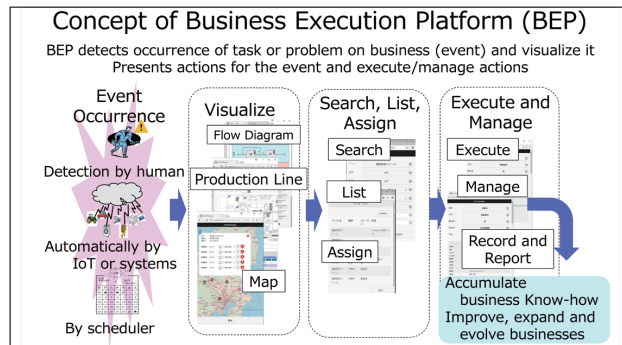

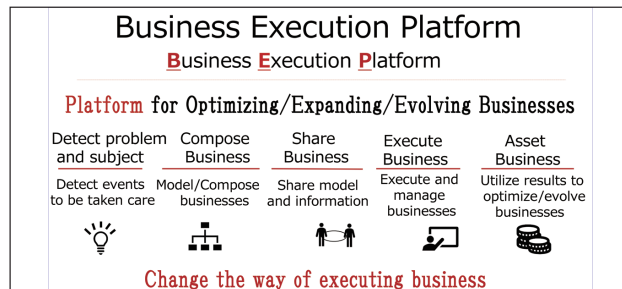

- Accumulating staff's know-how as EA model
- Improving business performances by visualizing both business structure and execution
- Expanding businesses by flexibly create/change EA model.
- Enabling various businesses to be executed on IT platform including typical businesses through flexible EA model. Models spans from IoT to sales support.
- Making the best use of company's IT investment by cost-effective and easy/rapid implementation of BEP

Company Introduction

Business Progress Inc. was established to help companies make the best use of their staff and resources by modeling/executing business on the state of the art modeling/executing platform of BEP. In the new era of AI/IoT, traditional process modeling cannot follow changing business situations, as emerging data is the key for businesses, not inflexible process execution. Business Progress Inc. helps companies to optimize businesses both from methods and platform.

Others (Comments)

Company strength: We have deep experiences and knowledges in the area of business modeling and information system building. These bring us finally the new methods as well as business execution platform. We believe so many companies enjoy the methods and platform.
