

Product and technology information

Our product of interest is a next-generation plane-wave speaker system. We have been researching and developing such systems for around 20 years, with the goal of creating speakers with crystal clear sound. Over the years, we have acquired advanced knowledge of transmitting sound by producing and executing plans that are suited to the conditions of various environments. For example, we have deployed plane-wave speakers for stage reading performances in an outdoor space for 3,500 people, announcements within baseball domes, conventions in gymnasiums, ceremonies in Buddhist temples, recitations in churches, classes in schools, and outdoor digital billboards.

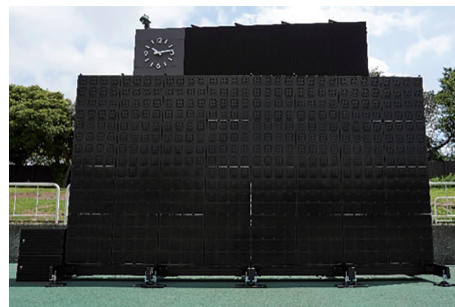

With this speaker you can beam steer your desired sound to places you want and divert sound away from places like neighbourhood and other areas.

Company Introduction

We are a PA company located in Yokohama, Japan. Our primary business is PA (public announcement) development of our own products and import and retail of overseas audio equipment. Since the beginning of Dream Inc, we have been known for customer-friendliness, flexibility, and a very good cost/performance in the PA industry but providing high quality in-house speaker systems at the same time.
